

August 8, 1957.

Mr. Theron Ashcroft  
Cedar City, Utah.

Dear Theron:

The spurling meter we discussed in Boulder, has arrived. However, I have to locate some connections and then I will bring it down to Cedar City. This should be in the near future.

Your report of July 31, 1957, appears to be of excellent quality but as yet I have not had time to go over it thoroughly. There is some additional information that I would like to have if it is available. The following is the heading under which it might be contained:

Canal--Type of Soil--Flow--Max. Cap.--1st Meas.--2nd Meas.--  
Distance between Measurement--Loss/mile--Remarks.

At present, I am having the requested charts printed and they will be mailed to you in a day or two.

If you have the time, you might gather information of seepage losses on Shoal Creek, Little Pinto, Murrie, Walter Murrie, or any creek in the area where they may be important.

You may replace the canvas on your weir under the same procedure as before and submit the receipts to this office.

Let me know if you need anything else. See you on my next trip down.

Yours truly,

Donald C. Norseth  
DISTRIBUTION ENGINEER
